PRODUCTIVITY IN ZEN STYLE

THE FIRST ELECTRIC OAK DESK WITH
ARTIFICIAL INTELLIGENCE, AUTOMATING
YOUR WORK

WWW.INKDESK.EU

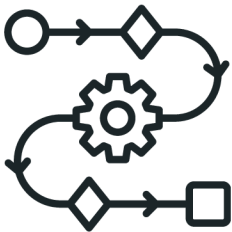

InkDESK

Information

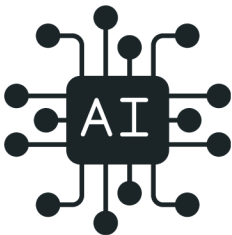

Productivity in ZEN style means no unnecessary information or distractions. Display only what is important at the moment – in the morning, the date; at the end of the day, the travel time home; a rain warning, but only when it's actually going to rain; or competitor price changes, but only when new price lists appear. More complex, personalized reports are sent to you by email. You decide what and when is important to you.

Automation

By clicking selected icons on the desk, you can trigger scenes, control physical devices (desk height, lighting, TV, etc.), or launch more complex sequences of events. If a process can be described by an algorithm (e.g., retrieving data from a spreadsheet, pasting it into a text file, and sending it via email), your desk can execute it for you – with just one click.

Artificial intelligence

For processes requiring critical thinking, you can leverage artificial intelligence. For example, you can create an automation that sends you an email asking for a company name, and after receiving your response, it will generate a financial report along with an analysis based on your criteria. Create advanced AI agents and launch them with a single click. You can have experts at your fingertips who respond (via email or voice) according to your guidelines, using your knowledge sources. Access to personalized artificial intelligence has never been this easy!

Minimalism

No more distractions from unnecessary notifications, excessive options, and colorful displays. Only the information and automations you truly need – in a clear format, always visible, always within reach.

Individualism

Easily design what your desk should display and what you want to control – with no coding or minimal coding (low-code, no-code). Create your perfect workspace yourself.

Functional beauty

The desk is made from natural materials – oak and linoleum. It features one of the best drive systems on the market (lifting capacity up to 100 kg, speed of 40 mm/s, noise level <50 dB). Equipped with a touch e-paper display.

Speed and accessibility

Increase your productivity by automating repetitive tasks and processes, turning them into icons that are always within easy reach.

Versatility

Integration with any device and service – including via API. A rich library of ready-to-use integrations thanks to the Node-RED environment and MQTT support.

Security, independence

All automations are stored locally (no subscription required). You can also use local artificial intelligence.

Example screens:

1 2 3

Information

1. Travel time home
2. Weather forecast
3. Generating and emailing a personalized report (data collected algorithmically from multiple sources)

1 2 3 4

Automation

1. Desk - standing/sitting position with precise height adjustment (including height readout)
2. Lighting - on/off + color and brightness adjustment
3. "Work" scene - closing curtains, adjusting desk height and lighting
4. Music - media player control

2 3

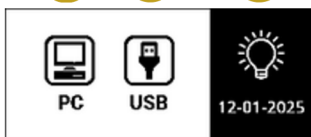

Artificial Intelligence

1. Technical Support - AI agent responds verbally to questions based on a PDF documentation file
2. Business Consultant - AI agent requests a tax identification number via email and then sends back a financial report with personalized analysis
3. Tax Assistant - AI agent answers tax-related questions via email based on the tax law of the specified country

1

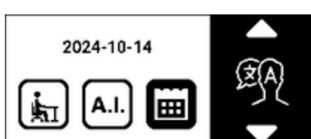

1 2 3

MIX - a hotel desk

1. Turn on the built-in PC + switch monitor, keyboard, and mouse
2. Automatically switch monitor, keyboard, and mouse when a guest's laptop is connected
3. Turn desk lamp on/off and display the date

1 2 3 4

MIX - a desk for the office

1. Desk - standing/sitting position
2. Automatic offer generation - retrieve company data (tax identification number), insert it into a template, save as PDF, and send via email
3. Information display - date, exchange rates, weather, travel time home
4. AI Assistants - translator, proofreader, technical advisor
